

To Keep Your Warranty In Force

Congratulations on your wise decision to treat your surface with Diamon-Fusion®. While Diamon-Fusion® dramatically reduces the cleaning requirements of your treated glass, you do have to perform some cleaning and maintenance to ensure on-going performance.

Following the detailed maintenance instructions below and utilizing the described maintenance accessories will ensure many years of satisfaction. For your convenience, Diamon-Fusion International has created a Consumer Maintenance Kit that includes everything described:

- DFI Revitalizer - This is used to bring back your DFI treated surfaces to "just applied" condition. It can also be used as a basic protective treatment for anodized aluminum frames and hardware, and vinyls and plastics.
- DFI Restoration Powder - This powder, combined with water and a LIGHTTOUCH, can be used if necessary when basic maintenance has not been done.
- Nylon Cleaning Puff - To wipe down the treated surface on a regular basis.
- White Scrubber Pad - For use if needed.
- Microfiber Towel - Used for polishing the glass after applying the Revitalizer.

Regular Maintenance Recommendations to Maximize the Life and Benefit of your DFI treated surface:

After each use: Rinse or spray the surface with cool (for best results), clean water. Wipe it dry or let the water drain off and pat dry the few remaining droplets. You may use a squeegee, but this is not necessary or recommended, and may result in requiring more frequent use of the Revitalizer.

Once a month: Wet the surface and use the included Nylon Cleaning Puff and go over the wet surface, rubbing in a circular motion. You should feel places that are "sticky" going back to slick again. Then rinse or spray the surface with cool, clean water just as you do after each use. Wipe it dry or let the water drain off, and pat dry the few remaining droplets.

Every several months: If necessary, use the White Scrubber Pad on any sticky or visibly stained areas that are not coming off with the Nylon Cleaning Puff. If stains persist, use the Restoration Powder with the Nylon Cleaning Puff and a LIGHTTOUCH to remove. After removing the stains and assuring good ventilation in the area to be treated, apply the Revitalizer. Rub it in and polish it off with the Microfiber Towel. This will bring the water repellency back close to the original, "like-new" application level. Warning: Using too much pressure with the Restoration Powder can damage the DFI coating.
